

Vaultus Mobile SharePoint Solutions

Microsoft SharePoint Server 2007 is a superior collaboration platform that offers an elegant way for people to share content and ideas, connecting team members across the organization.

This powerful out-of-the-box solution facilitates teamwork and increases productivity by offering employees, partners, and suppliers a common set of content publishing tools, streamlined workflow processes, and information reporting tools that break down the silos of communication and bring people together.

However, to succeed in today's business world, people need to leave the office and work face to face with their partners and customers. Extending the power of SharePoint to mobile devices ensures that the value of your SharePoint site is not lost and collaboration won't suffer even when co-workers are out of the office. Armed with Vaultus Mobile SharePoint, teams can quickly access, modify, and share critical business information on any of the most popular mobile devices including RIM Blackberry, Windows Mobile and iPhone.

Vaultus Mobile SharePoint Solutions, built using Vaultus' award winning mobiScaler technology, is the only out-of-the-box mobile solution that achieves new levels of performance, usability, security and handset battery life. mobiScaler is a scalable, plug and play framework that requires no changes to your customized SharePoint site while delivering Fort Knox-style data security, accelerated application performance and integrated access to critical data from SharePoint.

"Extending the power of SharePoint to mobile devices is the next natural step if you wish to fully unlock the creative potential of your employees and enable them to innovate wherever they are"

- **Rob Consolazio** VP and GM for Microsoft Products at Vaultus.

KEY BENEFITS

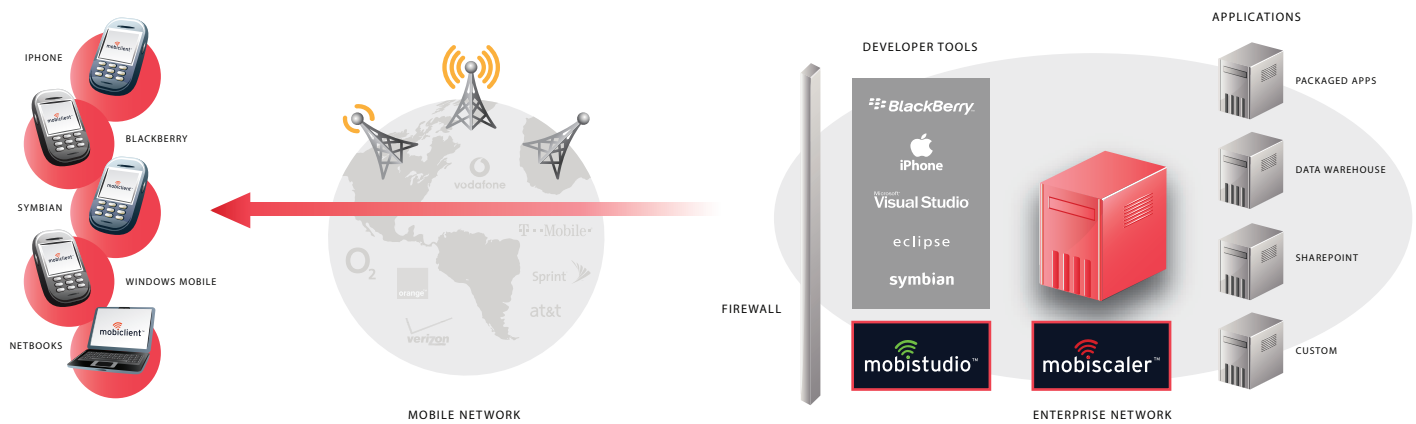

BENEFITS TO IT ORGANIZATIONS

- Non-Invasive plug-in to existing network infrastructure and operational systems.
- Out-of-the-box usability with no requirement to modify the SharePoint site to accommodate mobile team members.
- SharePoint data made available to employees, business partners, and even customers.
- Protects existing and future application development & platform investments.

BENEFITS TO MOBILE WORKERS

- Easy to navigate, SharePoint like UI's.
- Highly responsive applications, independent of signal strength and bandwidth.
- Longer battery life enabling a full day of use, without recharging.
- Secure data even if the device is lost or stolen.

mobiScaler™ Framework for SharePoint

mobiScaler™

A revolutionary new class of enterprise mobility software that provides a lightweight cohesive set of services that complement existing application and data management tools. mobiScaler is used to develop and deploy mobile applications that plug into the existing network infrastructure and data center, is enterprise-ready, and easy to build and use.

mobiStudio™

A cross-device mobile application builder that cuts application development time by allowing you to write your application once and run it on any of the most popular smartphones including, BlackBerry, Windows Mobile, Nokia Symbian and iPhone 3G.

KEY FEATURES

FEATURES FOR IT

- **Application Provisioning**
Manages application delivery and updates, based on user and device profile.
- **Push Service**
Enables developers to have a single gateway for pushing data to BlackBerry, iPhone, Windows Mobile & Nokia Symbian.
- **“Lease Key” Security**
Developers can build apps that are fully secure. If a device is lost, the Lease Key renders the applications & data inaccessible – even if the handset is “off the network”.
- **Data Compression**
Enables developers to build mobile applications with 90% over-the-air compression.

FEATURES FOR MOBILE WORKERS

- **Network Optimization**
Senses, tracks, and optimizes connections between wireless smartphones and back office systems. Application tuning creates more responsive applications.
- **Intuitive Dashboards**
Business data is presented in a clean and easy to navigate dashboard that empowers employees to make critical, real-time decisions no matter where they are located.
- **Location-Based Services**
Location-aware applications across handsets.
- **Data Compression**
Data compressed to 10% of its original size enabling a longer battery life.

Vaultus clients include [SAP](#), [E*Trade](#), [Merrill Lynch](#), [Wachovia](#), [Prudential](#), [Abbott Labs](#), [Genzyme](#), [Home Depot](#), [Procter & Gamble](#), [China.com](#), and the [U.S. Army](#). mobiScaler ensures that your enterprise applications are high-performing and secure, enabling you to offer a great user experience for your mobile workers while reducing operational costs and headache for IT.
